SUMMARY

Computer Science undergraduate (CGPA 8.67) with strong foundations in **Full Stack Development (MERN)** and hands-on exposure to **Generative AI** systems. Experienced in collaborating with GenAI engineers on architectures involving RAG, Lang Chain, and LLM integrations, with a focus on building **scalable AI-powered web applications**.

SKILLS

- **Frontend:** React.js, Tailwind CSS, HTML5, CSS3, JavaScript
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, FastAPI, MongoDB, Mongoose, MySQL, PostgreSQL
- **GenAI & AI Concepts:** LLM, RAG (Retrieval-Augmented Generation), Lang Chain, Prompt Engineering, OpenAI APIs
- **Programming Languages:** JavaScript, Python, Java, C
- **Tools/Frameworks & Others:** Git, GitHub, Next.js, Flask, Performance Optimizations, Testing, Debugging

PROJECTS

Medical Report Analyzer (2nd Place: – Citizen-Hack 2.0 Digital Summit Hackathon)

- Built a **full-stack medical analysis platform** to process reports, perform symptom analysis, and identify potential root causes.
- Developed end-to-end solution using **MERN**, with **Node-based services** to connect GenAI models to the application.
- Collaborated with GenAI developers to ensure seamless LLM integration and data flow pipelines with optimized performance. **Improved retrieval speed by up-to 40%** by implementing **Approximate Nearest Neighbors (ANN)** and **reduced response time** from **2 minutes to 30 seconds** by implementing **caching** and **asynchronous** processing.

AI Grammar Assistant

- Developed an **AI-powered web application** for grammar correction and sentence rephrasing using **LLM-based APIs**.
- Integrated **GPT-based models** for real-time text analysis with asynchronous REST APIs.
- Built responsive frontend in React and scalable backend in Node.js.

WORK EXPERIENCE

Aushadham HealthTech — Software Engineering Intern (Jan 2025 – Mar 2025)

- Collaborated with GenAI engineers to integrate AI-powered insights into a healthcare web platform using the MERN stack.
- Implemented user authentication, medical report upload/retrieval, and GenAI API integration to enhance usability and performance.
- Gained hands-on exposure to GenAI system workflows, including RAG pipelines, prompt design, and inference integration using libraries like **LangChain**, **FAISS**, Gemini API.
- Accelerated project delivery from **20% to 75% completion** within 3 months through sprint-based Agile execution.

Salesforce Supported Virtual Internship (May 2025 – Jul 2025)

- Completed an 8-week Salesforce Virtual Internship focused on Admin and Developer tracks.
- Worked with Salesforce CRM, Apex programming, automation tools, and Trailhead Super-badges.
- Collaborated in a virtual team environment and earned certification recognized by Salesforce and AICTE.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

GITAM University | Sep 2022 – Apr 2026 (Expected) | **CGPA: 8.67 (Current)**
